THE PROBLEMS WE SOLVE

When your current software doesn't fit the work, and spreadsheets have hit their limit

Most companies with a few dozen employees still manage orders, inventory, customers, and field records in spreadsheets and chat apps. Off-the-shelf ERP is expensive and doesn't match how they work, so even after adopting it they end up back in spreadsheets.

Data is scattered

The same business data is split across many spreadsheets and personal PCs, and people keep asking which file is the latest.

The same data is entered again and again

Copying the same numbers into order sheets, inventory lists, and reports leads to mistakes, and the numbers don't match at month-end.

Field records get lost

Records kept on paper forms and in chat photos are hard to find later and fall short as evidence.

Off-the-shelf software doesn't fit

You have to adapt your work to the program, the features you need are missing, and you pay for ones you don't use.

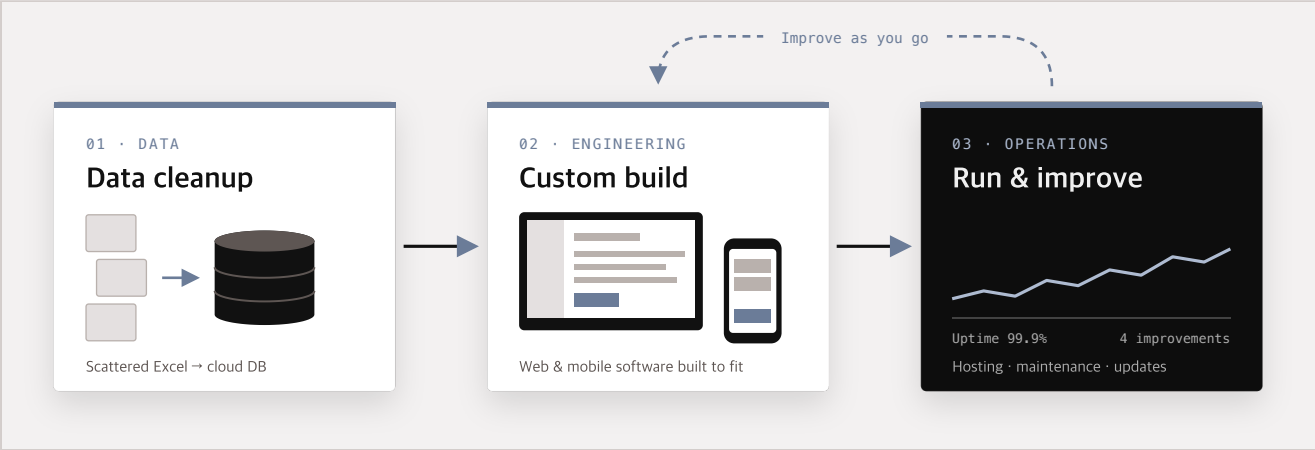

THE NEXUS ANSWER

We bring your scattered data into one cloud, build software that fits the way your company works, and keep it running.

THE NEXUS APPROACH

We don't fit your company to a package. We fit the software to your company.

We organize the data, build to fit, and keep running it after launch. Work only really changes when all three sit in one team.

COMPARED WITH THE ALTERNATIVES

	OFF-THE-SHELF ERP	OUTSOURCED DEVELOPERS	NEXUS SOLUTION
Fit with your work	You adapt to the program	Built to your spec	We assess the work first, then design to fit
What gets built	Fixed features	You have to decide	Decided together through the assessment
Data cleanup	You migrate it yourself	Often out of scope	Migration of existing spreadsheet data included
After launch	Updates on the vendor's schedule	Ends at delivery	We keep running and improving it
Existing tools	Assumes replacement	Negotiated separately	Good tools are connected and kept

Start with an assessment, then build and run

Start small, confirm it works, and expand. Every stage leaves a deliverable you can attach to an approval request.

01 Data Assessment

ENTRY

Companies with so many spreadsheets they don't know where to start

WHAT'S INCLUDED

- Map of where your data lives
- Duplicate, error, and gap analysis
- Cloud database design
- Systemization priorities

FORMAT

2–3 weeks · Interviews by department · Review of real spreadsheets and documents

WHAT YOU GET

Data status report · database design · phased roadmap and quote

Budget line item · Business data assessment and systemization plan
If you go on to a build contract, the assessment fee is deducted from the build cost.

02 Custom Business Software

CORE

Companies getting by on spreadsheets because off-the-shelf software doesn't fit their work

WHAT'S INCLUDED

- Migration of existing spreadsheet data
- Web and mobile business apps
- Permissions and approval flows
- Dashboards and automated reports
- Field photos and document evidence
- One year of operations and improvements

FORMAT

From 6 weeks · Demo every two weeks · Tested with real data

WHAT YOU GET

A working system · operations manual · staff training

Budget line item · Business system development · digital transformation (DX)

03 Managed Operations

OPERATIONS

Companies that want a dependable system without an in-house IT person

WHAT'S INCLUDED

- Cloud hosting and backups
- Issue response
- Monthly feature improvements
- Usage reports

FORMAT

Monthly contract · Monthly operations report · Regular improvement meetings

WHAT YOU GET

A stable, running system · monthly operations report · change history

Budget line item · System maintenance and operations support

Add only what you need

Keep the tools you already use, and once your data is in order, go a step further with AI.

04 Integration & Customization

OPTIONAL

Companies that want to keep the tools they have and fill only the gaps

WHAT'S INCLUDED

- Rollout and customization of open-source ERP and accounting, such as Odoo
- Online store and third-party data integration
- Groupware and accounting software integration
- Removal of duplicate entry

FORMAT

From 4 weeks, depending on scope · Review of current systems · Demo at each stage

WHAT YOU GET

Connected systems · data flow diagram · operations manual

Budget line item · Existing system integration and customization

When building something new isn't the answer, we find a good tool and fit it to your company.

05 AI Add-ons

ADD-ON

Companies whose data is in order and who want to add AI as the next step

WHAT'S INCLUDED

- Automatic extraction from receipts, contracts, and forms
- Automated report generation
- Q&A over your company data
- AI connected to your existing software

FORMAT

With a build or on its own · Includes internal AI usage guidelines

WHAT YOU GET

A system with AI features built in · internal AI usage guidelines

Budget line item · AI features and workflow automation

COST

Scope and scale differ for every company, so we quote per company after a 30-minute consultation or a Data Assessment.

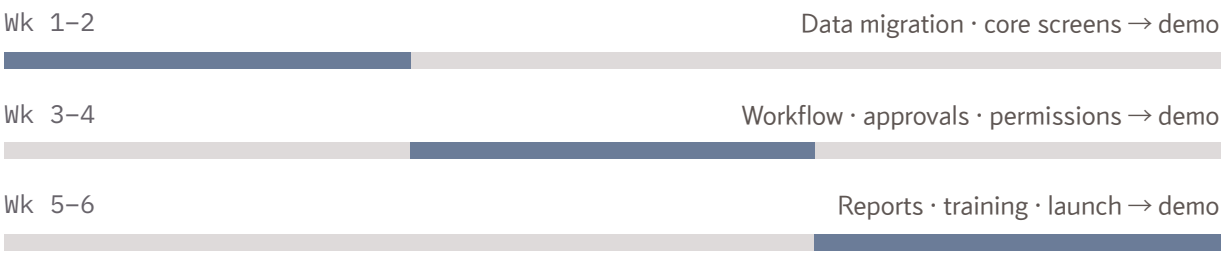

HOW WE WORK

Five steps, from assessment to operations

You don't wait until it's finished. Every two weeks we look at real screens together and adjust course, and we keep refining after launch.

01	**Assess**	We look at your spreadsheets, documents, and current workflow firsthand and decide what should become a system.
02	**Design**	We design the cloud database and screens, and prioritize the features that will make the biggest difference.
03	**Build**	We build in two-week cycles with a demo each time, testing and refining with your real data.
04	**Migrate & train**	We move your existing spreadsheet data over and train your team so they can use it from day one.
05	**Run & improve**	We handle hosting and maintenance, and keep building in the requests that come up as you use it.

SAMPLE BUILD SCHEDULE · 6 WEEKS

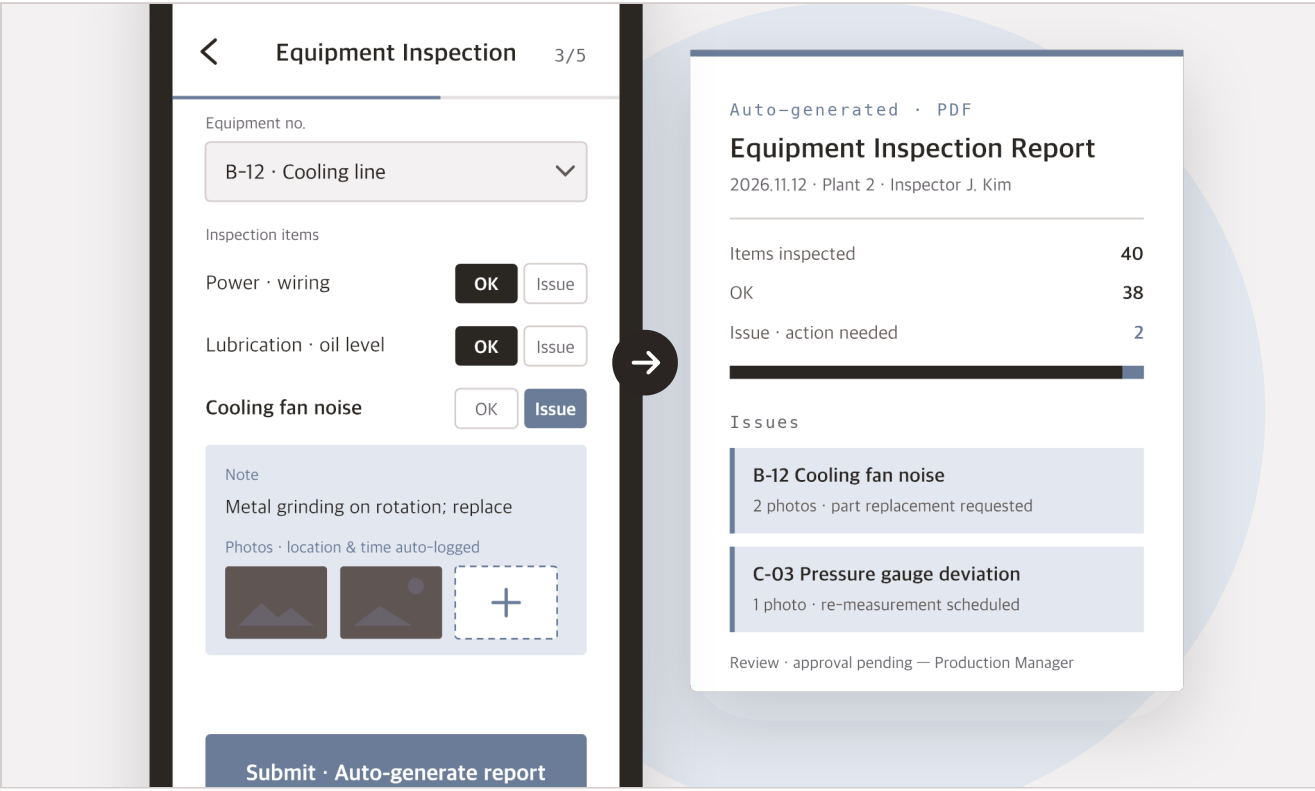

The actual schedule is set per company based on the assessment.

CASE 01 — DIGITAL FIELD FORMS

From paper and spreadsheet checklists to mobile entry and automatic reports

Inspection and reporting forms that were filled out on paper or in spreadsheets moved to a mobile app, so every entry lands in the database the moment it's made.

A sample screen. Real screens are designed around your company's work.

BEFORE	AFTER
Written by hand on paper forms	Entered on a phone, on site
Retyped into a spreadsheet back at the office	Saved to the cloud database on entry
Everyone used a different version of the form	Everyone uses the same current form
Reports compiled by hand every time	Reports generated with one button

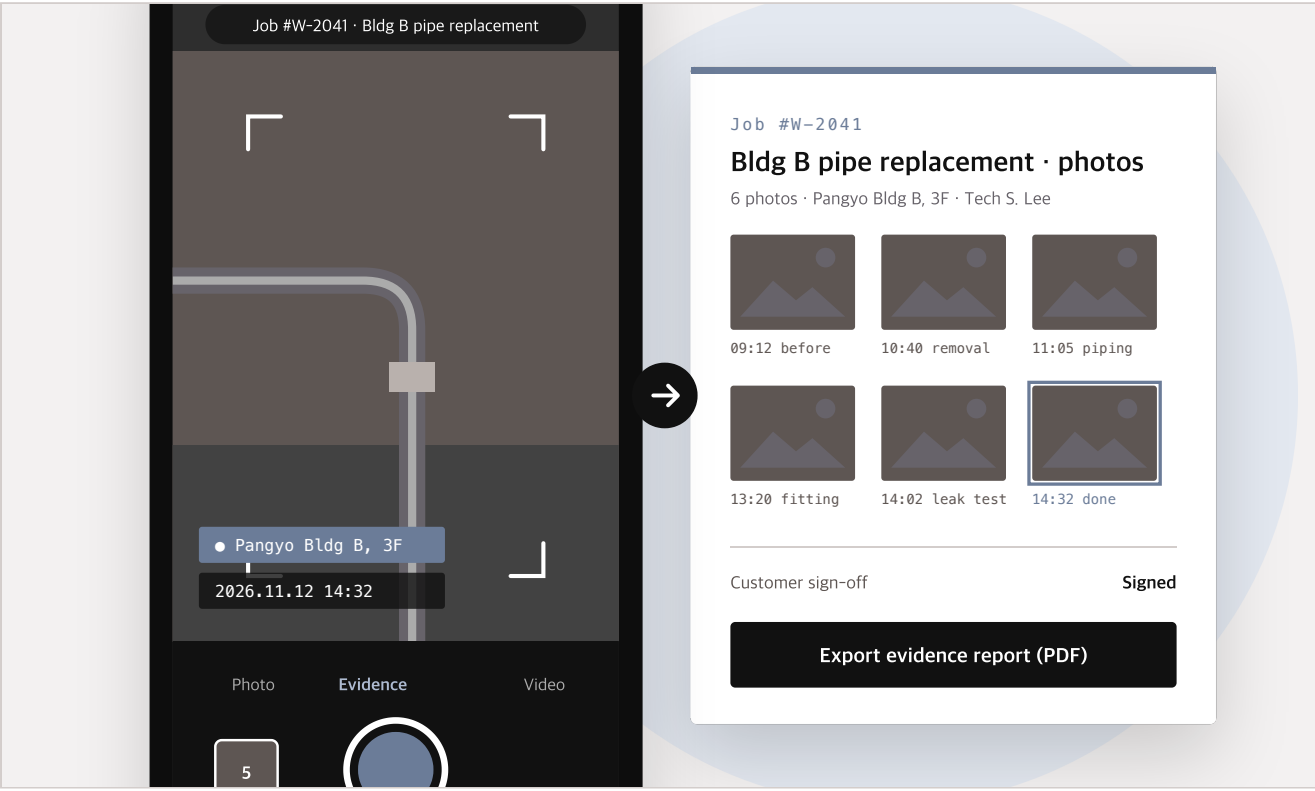

Mobile entry | Form versioning | Automatic reports | Review and approval flow

Also a fit for · Manufacturing quality checks, equipment maintenance logs, construction daily reports, facility safety inspections

CASE 02 — FIELD PHOTO EVIDENCE

Location, time, and job details recorded automatically with every photo

Field photos that used to be passed around in chat apps are now filed by job automatically, along with when, where, and what was photographed.

A sample screen. Real screens are designed around your company's work.

BEFORE	AFTER
Photos sent to a group chat	Pick the job in the app and shoot
Guessing which job a photo belongs to from its file name	Location, time, and job details recorded automatically
Digging through chat history to find a photo	Photos grouped by job and searchable
Too little detail to use as evidence	Exported straight to an evidence report

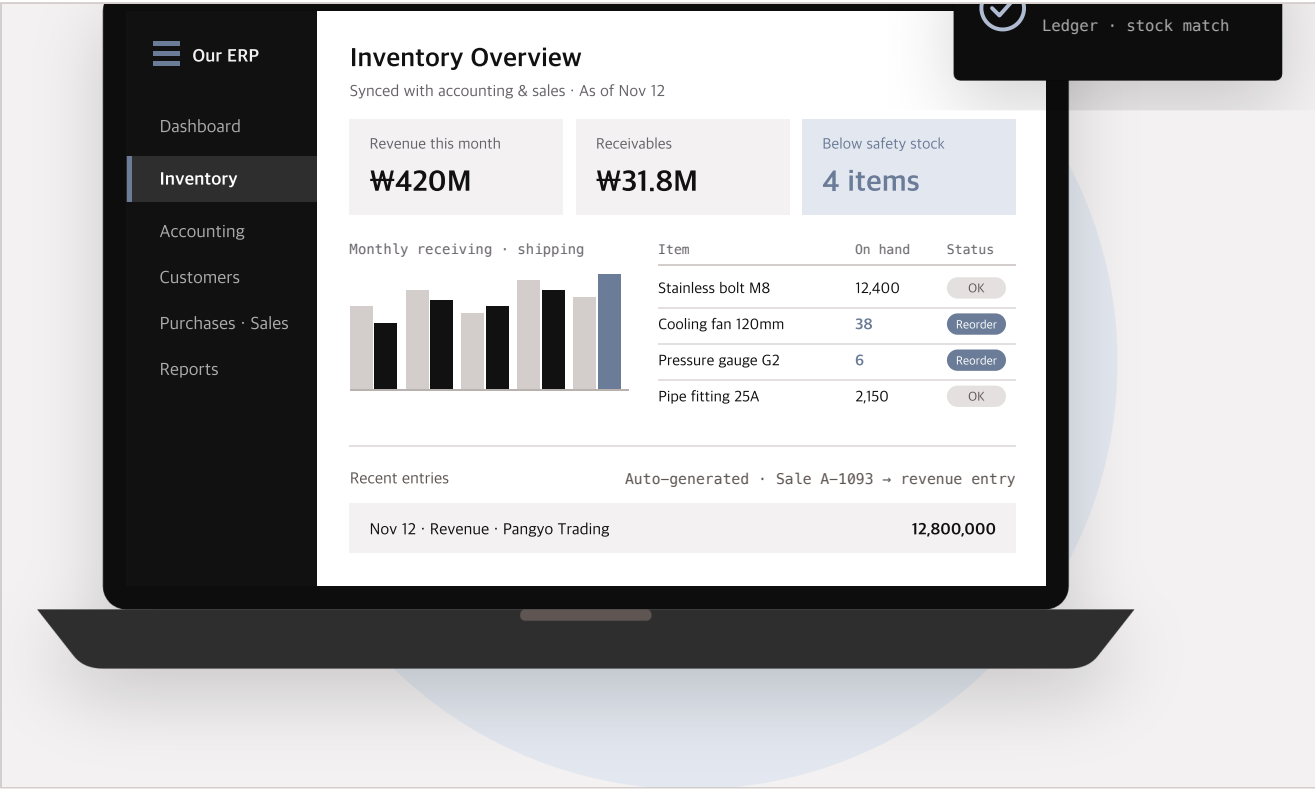

Photos by job | Automatic location and time | Search | Evidence report export

Also a fit for · Construction and defect management, equipment installation checks, delivery inspection, facility management

CASE 03 — TAILORED OPEN-SOURCE ERP

Accounting and inventory in one place, fitted to the company

We adapted an open-source ERP (Odoo) to the company's accounting and inventory work, rolled it out, and migrated the spreadsheet ledgers that had been scattered around.

A sample screen. Real screens are designed around your company's work.

BEFORE	AFTER
Accounting, inventory, and customers each in a separate spreadsheet	Accounting, inventory, and customers in one system
The same data entered several times	Enter once and related ledgers update automatically
Numbers that didn't match at every month-end close	Faster month-end close with matching numbers
Packaged ERP was expensive and didn't fit the work	Only the features the company needs, added to fit

Accounting · Inventory · Customer management · Spreadsheet ledger migration

Also a fit for · Small and mid-sized manufacturers and distributors, and rollouts done together with accounting and tax firms

BY INDUSTRY

The kinds of companies we work with

Manufacturing

Small and mid-sized manufacturers whose production, inventory, and quality records live in spreadsheets, and whose processes don't fit packaged ERP.

Production output and defect records · Raw material and inventory management · Quality inspection forms · Equipment maintenance history

Education

International schools, private schools, and academies that manage students, classes, grades, and parent communication across several tools.

Student and enrollment management · Grades and attendance · Parent notices and consultation records · Instructor scheduling

Distribution & Wholesale

Distributors and wholesalers that handle orders, inventory, and customers through spreadsheets and chat apps.

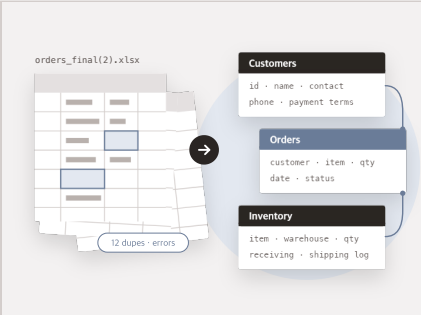

Order intake and shipping · Customer pricing and receivables · Inventory dashboard · Online store order integration

Professional Services

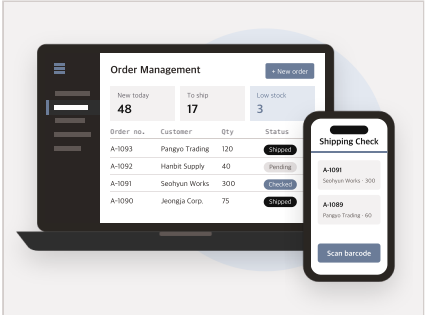

Accounting, tax, and labor consulting firms that spend a lot of time collecting client documents and processing evidence.

Client document collection portal · Automatic evidence extraction (AI) · Work progress tracking · Open-source ERP integration

PRINCIPLES

How we work

01

We start small

We turn your single most painful task into a system first, confirm it works, and then expand. We don't push a big contract up front.

02

We build only what's needed

If a good tool already exists, we recommend fitting it to your company. We build new only where your company truly needs it.

03

Your data is yours

All data belongs to the client and can be downloaded at any time. Access control and backups are part of the design from the start.

04

We stay close

We come on site quickly when you need us.

FREQUENTLY ASKED

How is this different from off-the-shelf software?

With off-the-shelf software, the company has to adapt to the program. Custom software keeps your current workflow and forms, so your team has little new to learn. If a good package already exists, we'll recommend fitting that to your company instead.

What if we don't have an IT person?

That's fine. We do the assessment and design with the people who do the work, and we handle development, hosting, and maintenance.

Is our data safe?

All data belongs to you and can be downloaded at any time. Access control and regular backups are part of the design from the start, and before any AI feature is used we set internal usage guidelines first.

Can we do just the assessment?

Of course. The assessment deliverables alone work as a systemization plan and as a basis for comparing quotes. If you later have us build, the assessment fee is deducted.

GET IN TOUCH

Just show us a few of the spreadsheets you use today

It's fine if you haven't decided what to build. In a free 30-minute consultation we'll work out together where to start.

1. Send us a message and we'll reply within three business days.
2. We look at your current work and data in a 30-minute consultation, online or in person.
3. We send you a proposed approach and a quote that fit your company.
